CHIYAN sanding cap main advantages

Lining

Chiyan:PA (Grade A Material)

Based on PA , Alias: Nylon, with high mechanical strength.High softening, high temperature resistance, high grinding efficiency, polishing smooth,slip, high concentricity, noise prevention, oil resistant, tolerant acid, alkali resistance,general solvent, good electrical insulation, self-extinguishing , non-toxic environmental protection, odorless, perfect weather resistance, easy dyeing.

Glue

Chiyan: Waterborne Polyurethane Adhesive
(non-toxic, transparent and environmentally friendly)

Sand Grit

Chiyan: pure natural sand

Brown corundum

Grade A brown corundum, high purity, wear resistance, less dust, good toughness.

Green silicon carbide

High hardness, good grain shape, good compactness, high precision grinding products. Green silicon carbide is made from petroleum coke and quartz sand by melting and recrystallization with electric heating and chemical salt to turning green.

Chrome corundum

High hardness, good toughness, low magnetic content, precision grinding product, 30% higher grinding force than brown corundum, high cleanliness.

The Surface Layer

Chiyan:

The sand grains are evenly distributed, polished smooth and does not hurt the skin.
